DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claim 1-15, drawn to a method of forming a composite membrane, classified in class 427, subclasses 245, 402, 331, 337.
 - II. Claim 16-19, drawn to a structure of a composite membrane, classified in class 210, subclasses 490, 500.27, 500.41, 506.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case a structure of a composite membrane can be configured such that a separation layer may be enclosed within a second surface of a support layer (see claim 16), while a method of forming a composite membrane only allows for coatings to be superimposed on top of one another (see claim 2).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. A telephone call was made to Morton J. Rosenberg on January 6, 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
